88

Total Cases Hospitalized
1/1/20 - 4/9/21

78

All data are extracted from MAVEN, MDPH, and vital statistics reporting. Presented data assumes that data sources are current and accurate as of the date they are reported. Case counts include probable cases (antigen and antibody tests) and confirmed cases (molecular tests). Percent positivity is calculated using only positive molecular tests, and does not include antigen or antibody tests.

*Active cases are cases with reported positive molecular and antigen results, who are currently in isolation under public health supervision.

**Partially vaccinated individuals have received 1+ doses of COVID-19 vaccine, but have either not received their final dose or have received their final dose less than 14 days ago. Fully vaccinated individuals have received their final dose of the COVID-19 vaccine at least 14 days ago.

***Vaccination rates per capita are calculated as a separate proportion for each respective age group. For example, approximately 80% of all 75+ year old Northampton residents are reported as being fully vaccinated. The data presented in the COVID-19 vaccinations graph is current as of 04/06/2021 and is sourced from MADPH vaccination surveillance through the Massachusetts Immunization Information System (MIIS).
