Board of Health Representative

Signature of Exterminator

*Demolition best practices relating to fugitive dust and debris must be adhered to in accordance with MGL Chapter 111, Section 122.

RULES AND REGULATIONS FOR EXTERMINATION FOR
RODENTS IN BUILDINGS TO BE DEMOLISHED

The Board of Health has adopted the following Rules and Regulations to be conducted before demolition of property:

1. A licensed and professional exterminator active in the business must be hired to perform the extermination of the building(s) to be demolished.
2. The Board of Health must be notified of the date and time of the extermination so that a Sanitarian can be present for inspecting and witnessing.
3. A fast acting rodent poison must first be used in sufficient quantity and bait stations to be adequately accessible to the rodents.

48 hours after this baiting, an anti-coagulating type or other effective rodenticide must be used and allowed to be present for 72 hours before demolition can begin. This is a total five (5) day treatment.

The poison should be checked by the exterminator at sufficient intervals in order to replace bait stations which are consumed. Sufficient data must be supplied to the department on the rodenticide used to satisfy the Board of Health of its effectiveness.
